tmrc Hackers

Passenger Yard

We at TMRC use the term "hacker" only in its original meaning, someone who applies ingenuity to create a clever result, called a "hack". The essence of a "hack" is that it is done quickly, and is usually inelegant. It accomplishes the desired goal without changing the design of the system it is embedded in. Despite often being at odds with the design of the larger system, a hack is generally quite clever and effective.

This original benevolent meaning stands in stark contrast to the later and more commonly used meaning of a "hacker", typically as a person who breaks into computer networks in order to steal or vandalize. Here at TMRC, where the words "hack" and "hacker" originated and have been used proudly since the late 1950s, we resent the misapplication of the word to mean the committing of illegal acts. People who do those things are better described by expressions such as "thieves", "password crackers", or "computer vandals". They are certainly not true hackers, as they do not understand the hacker ethic.

Also see the [definition of "hacker" in the on-line version of the New Hacker's Dictionary](#).
